

# Ecomapuá Amazon REDD Project

*Marajó Island, Pará State, Brazil*

The Ecomapuá Amazon REDD project is located on the Marajó island, Pará State, in the Brazilian Amazon region. The Marajó várzea is a valuable and threatened ecosystem at the same time.

The primary aim of the project is to avoid the deforestation of an area of 86,269 hectares on a property acquired by Ecomapuá Conservação Ltda. This project will generate reductions of 1,432,278 CO<sub>2</sub>e over a 30-year project period (from 01/01/2003 to 12/31/2032) on a subarea of 4,253 hectares.

In addition to forest protection, a part of the revenue from the emission certificates is used to improve the social and ecological conditions of the local population.

The Marajó island is an extremely high priority within the Brazilian Ministry of Environment, the Ecomapuá Amazon REDD project contributes to the national nature conservation targets and encourages at the same time further protection efforts in this valuable ecosystem.

Type of project:	Forest protection
Project N°:	107
Certifier:	TÜV Rheinland
